Cities in the Sky: Transforming the Broader Urban Fabric

The more populated our cities become, the taller and more vertical grow the buildings housed within them. Traditional notions of skyscrapers being isolating, unimaginative structures are cast aside as we begin to embrace the potential of tall buildings not only aiding wellness and social interaction, but benefiting their surrounding cities – environmentally, socially, aesthetically, and importantly, for the future.

The 3rd Annual Australian Smart Skyscrapers Summit 2019 will provide a platform for leading architecture, engineering, construction and design experts to explore the latest trends, concepts and solutions related to future-proof high-rise design.

About the Smart Skyscrapers Summit

The Australian Smart Skyscrapers Summit is a member of Expotrade Global's larger Smart Skyscrapers Series, with its major Northern Hemisphere event being held in Dubai yearly. Since its inception in 2017, the Australian Smart Skyscrapers Summit has quickly become one of the most significant events in the Southern Hemisphere.

Melbourne JUN 25-26

Technology Innovation in the Built Environment

- › Sustainable Skyscrapers and the Challenges Surrounding their Inception
- › Engineering High-Rises Smartly and Innovatively
