Australia's Only Dedicated Digital Twins Event

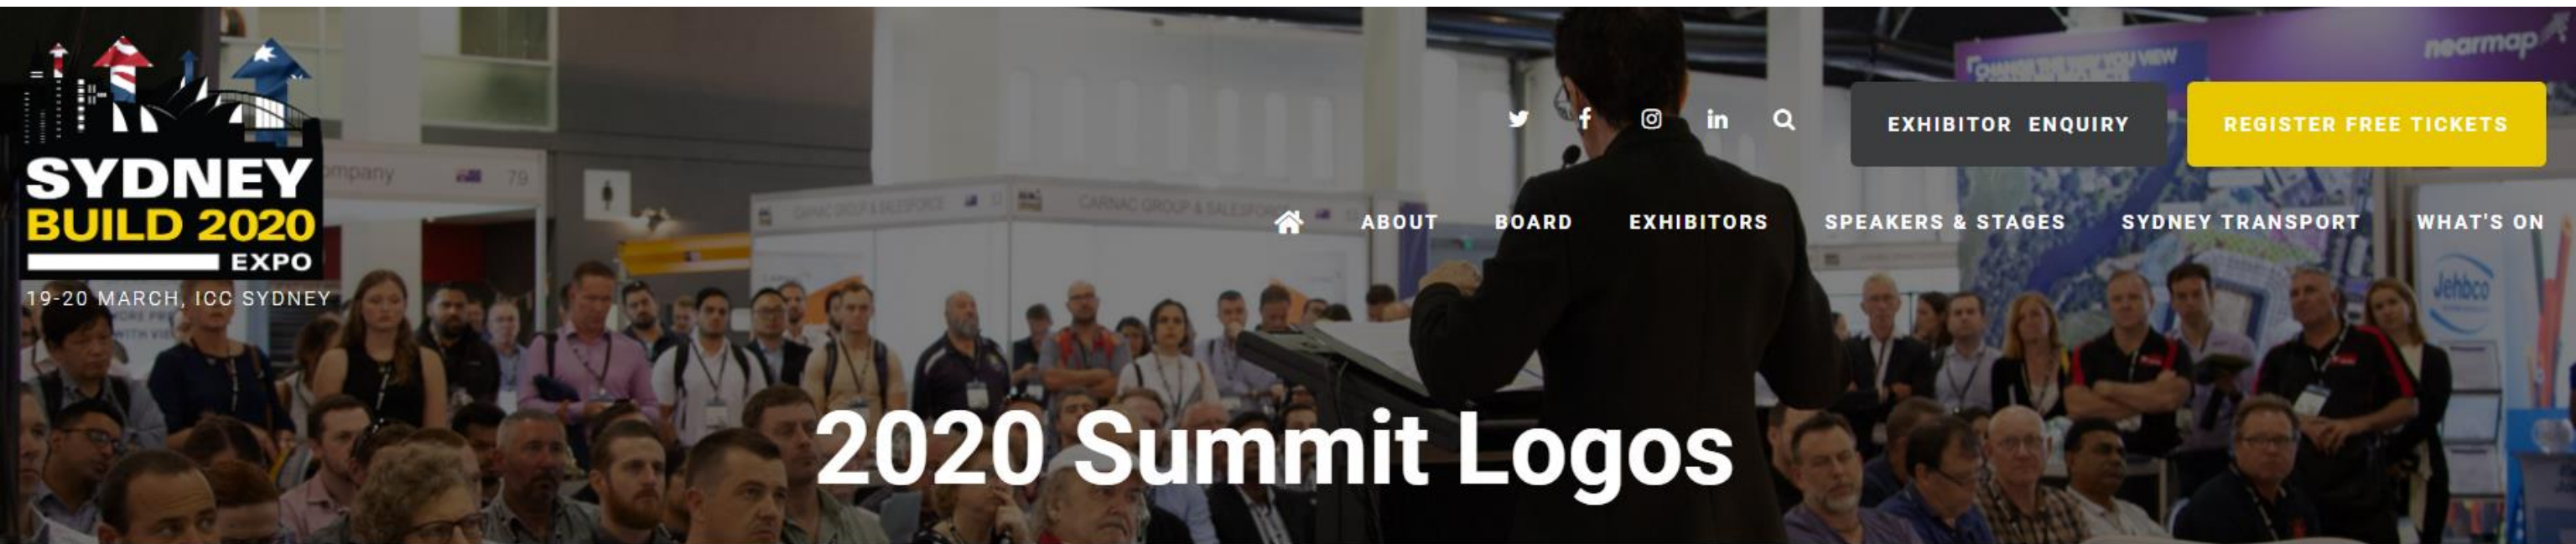

Harnessing 4D Modelling and Data Driven Decision Making to Develop Digital Twin Capability and Enhance Operational Efficiency

Australia is embarking on Industry 4.0 to help remain global competitiveness across various industries from Property Development, Manufacturing, Asset Management and Smart City Planning. Digital Twins are a key enabler for unlocking Industry 4.0's full potential, allowing for the combination of a physical assets in virtual form and real-time data to reveal information that will optimise business performance. Gartner reveals that by 2022, over two-thirds of organisations that have implemented IoT will have deployed at least one digital twin in production. Currently, 13% are already utilising digital twins and 62% are in the process or planning to do so. This reveals Digital Twin production may hit organisations closer than predicted.
